
One value per primary Holocene lake transition (MORA: 103; NOCA: 107) or modern plot pair (MORA: 330; NOCA: 277).
Boxes show variation among actual transitions/plots, not offsets or Bacon chronologies. Undefined directions are omitted; zeros remain.
Species contributions are projected along climate-predicted movement and divided by each transition duration, in centuries.
Axis zooms to visible boxes and whiskers; hidden outliers remain in all calculations.
