Species movement relative to climate-predicted movement

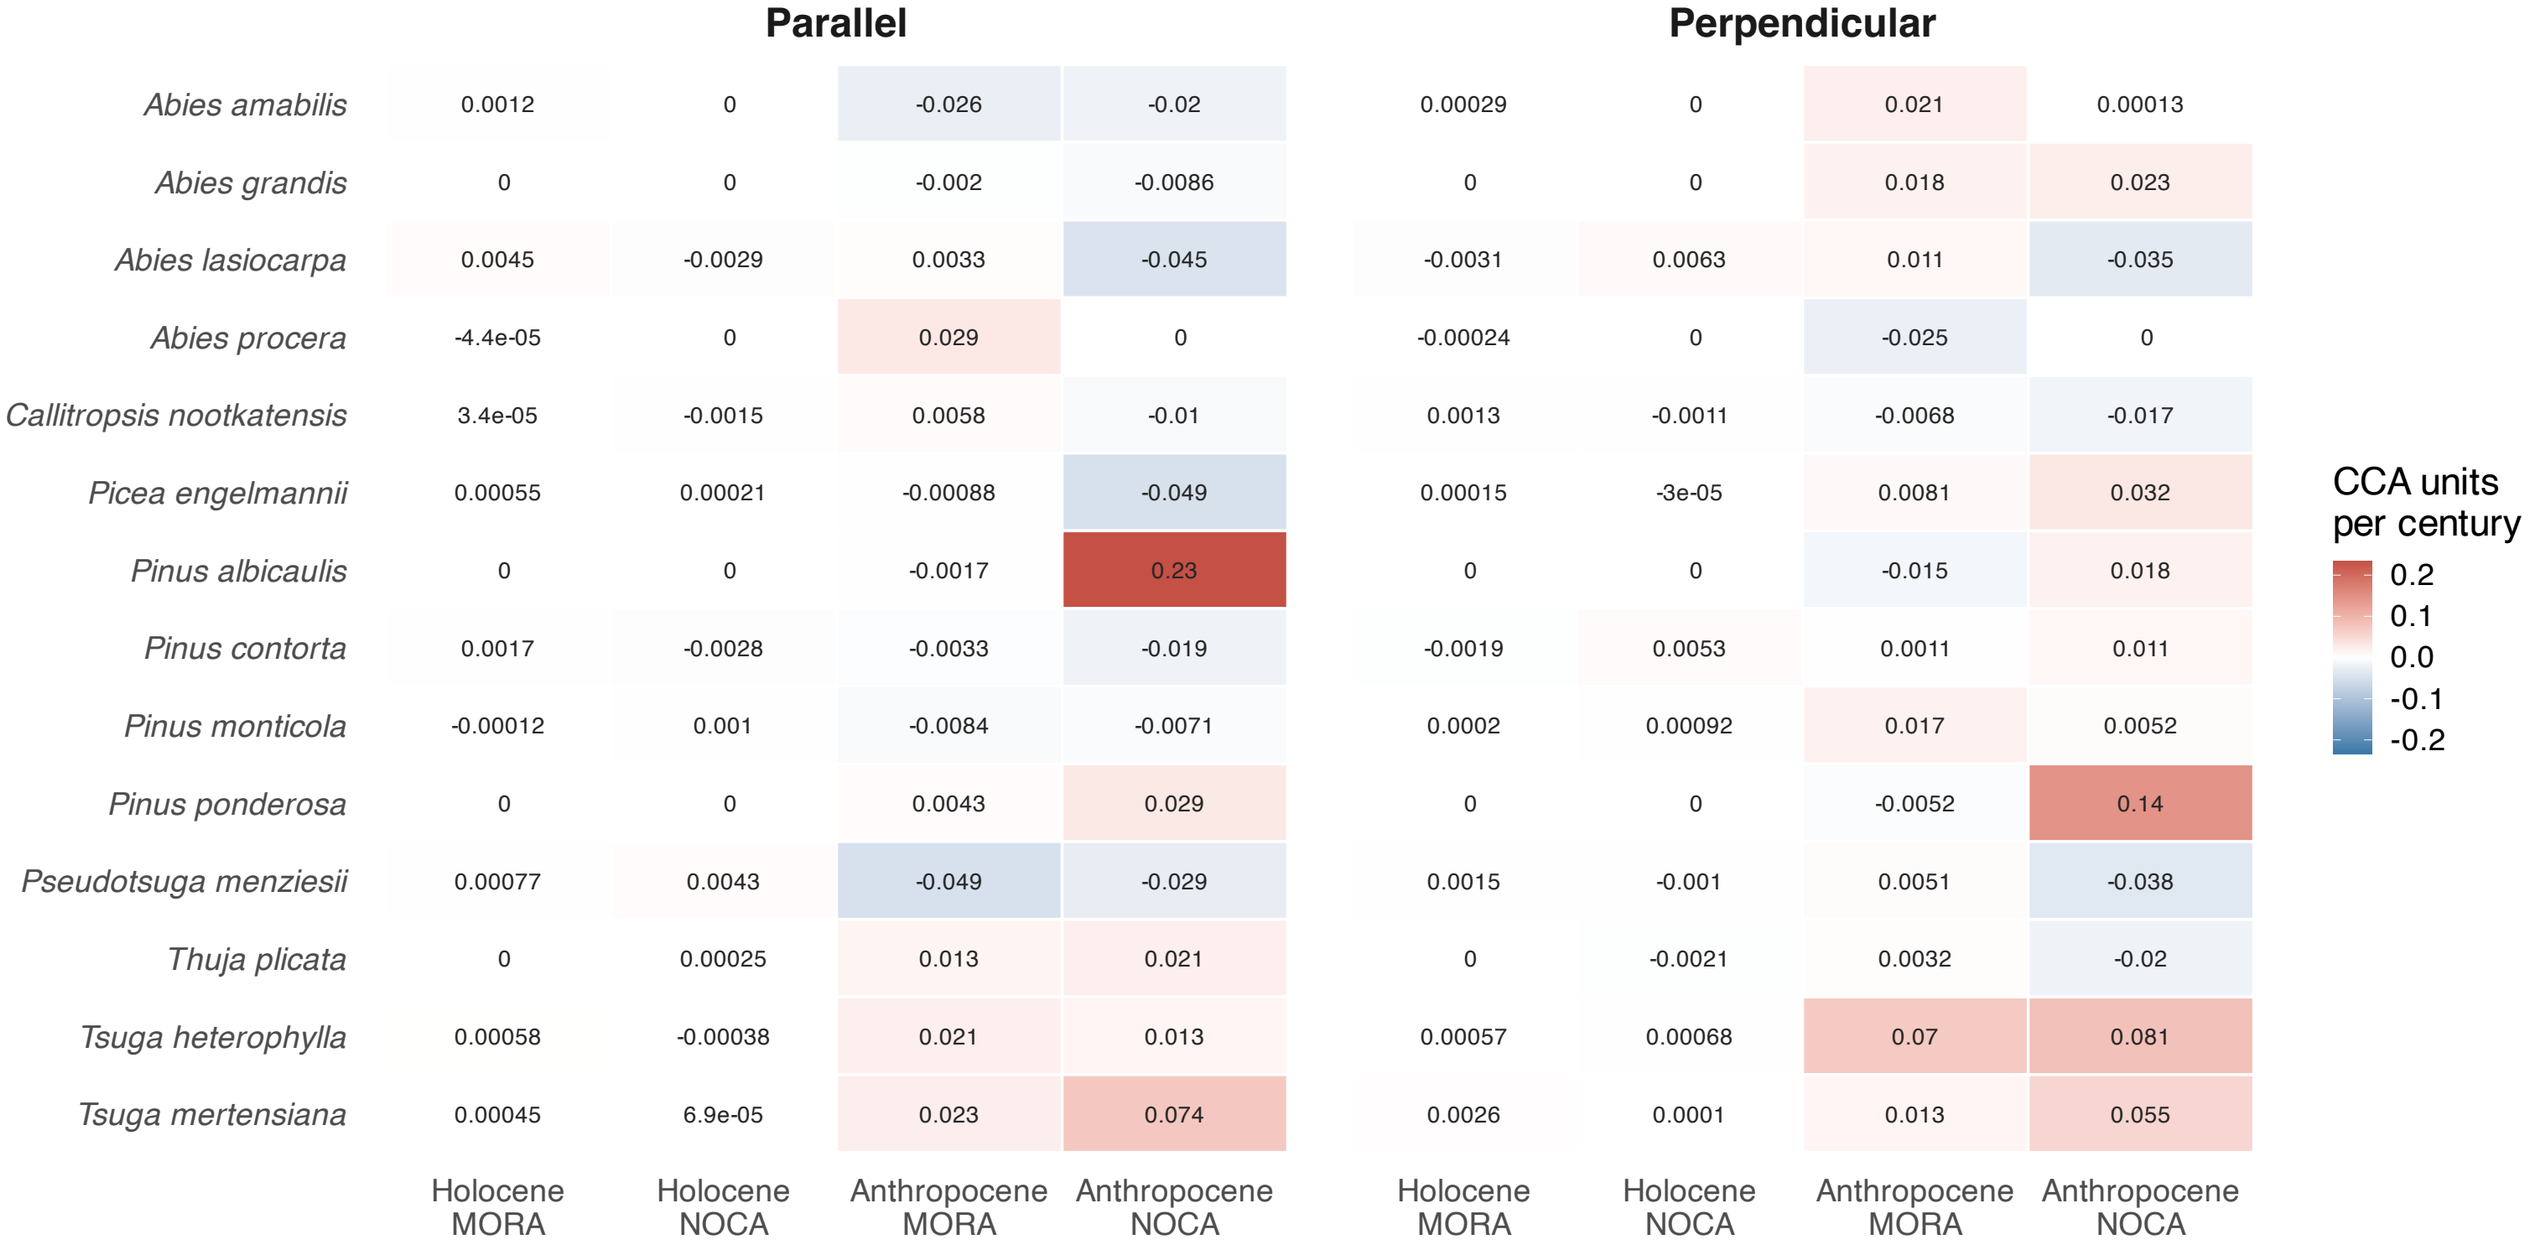

Holocene: offset 0 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.

Species movement relative to climate-predicted movement

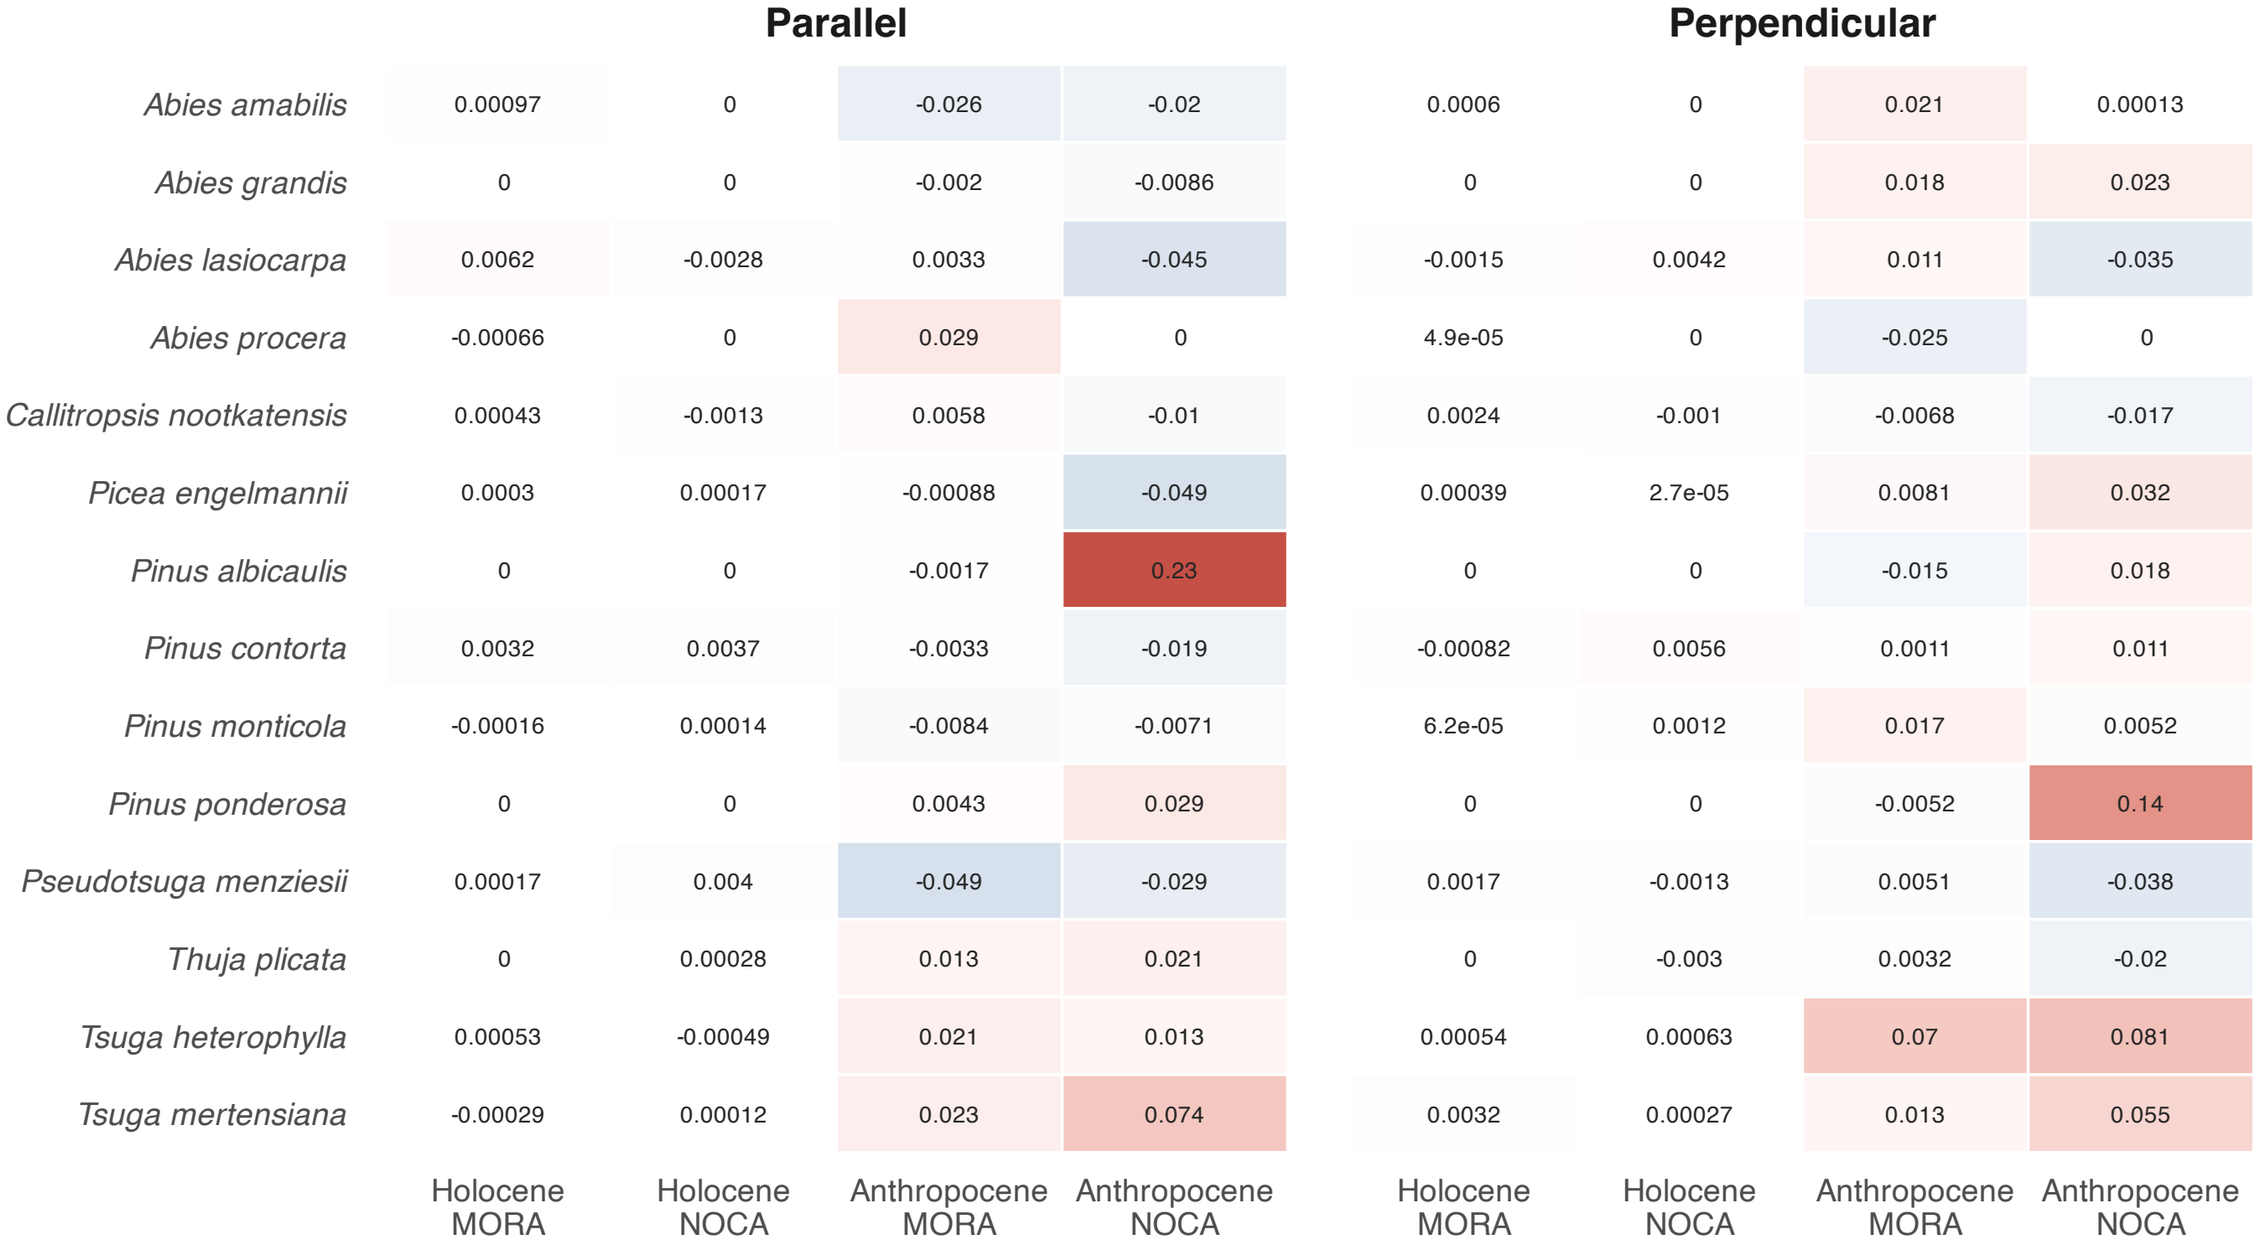

Holocene: offset 100 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.

Species movement relative to climate-predicted movement

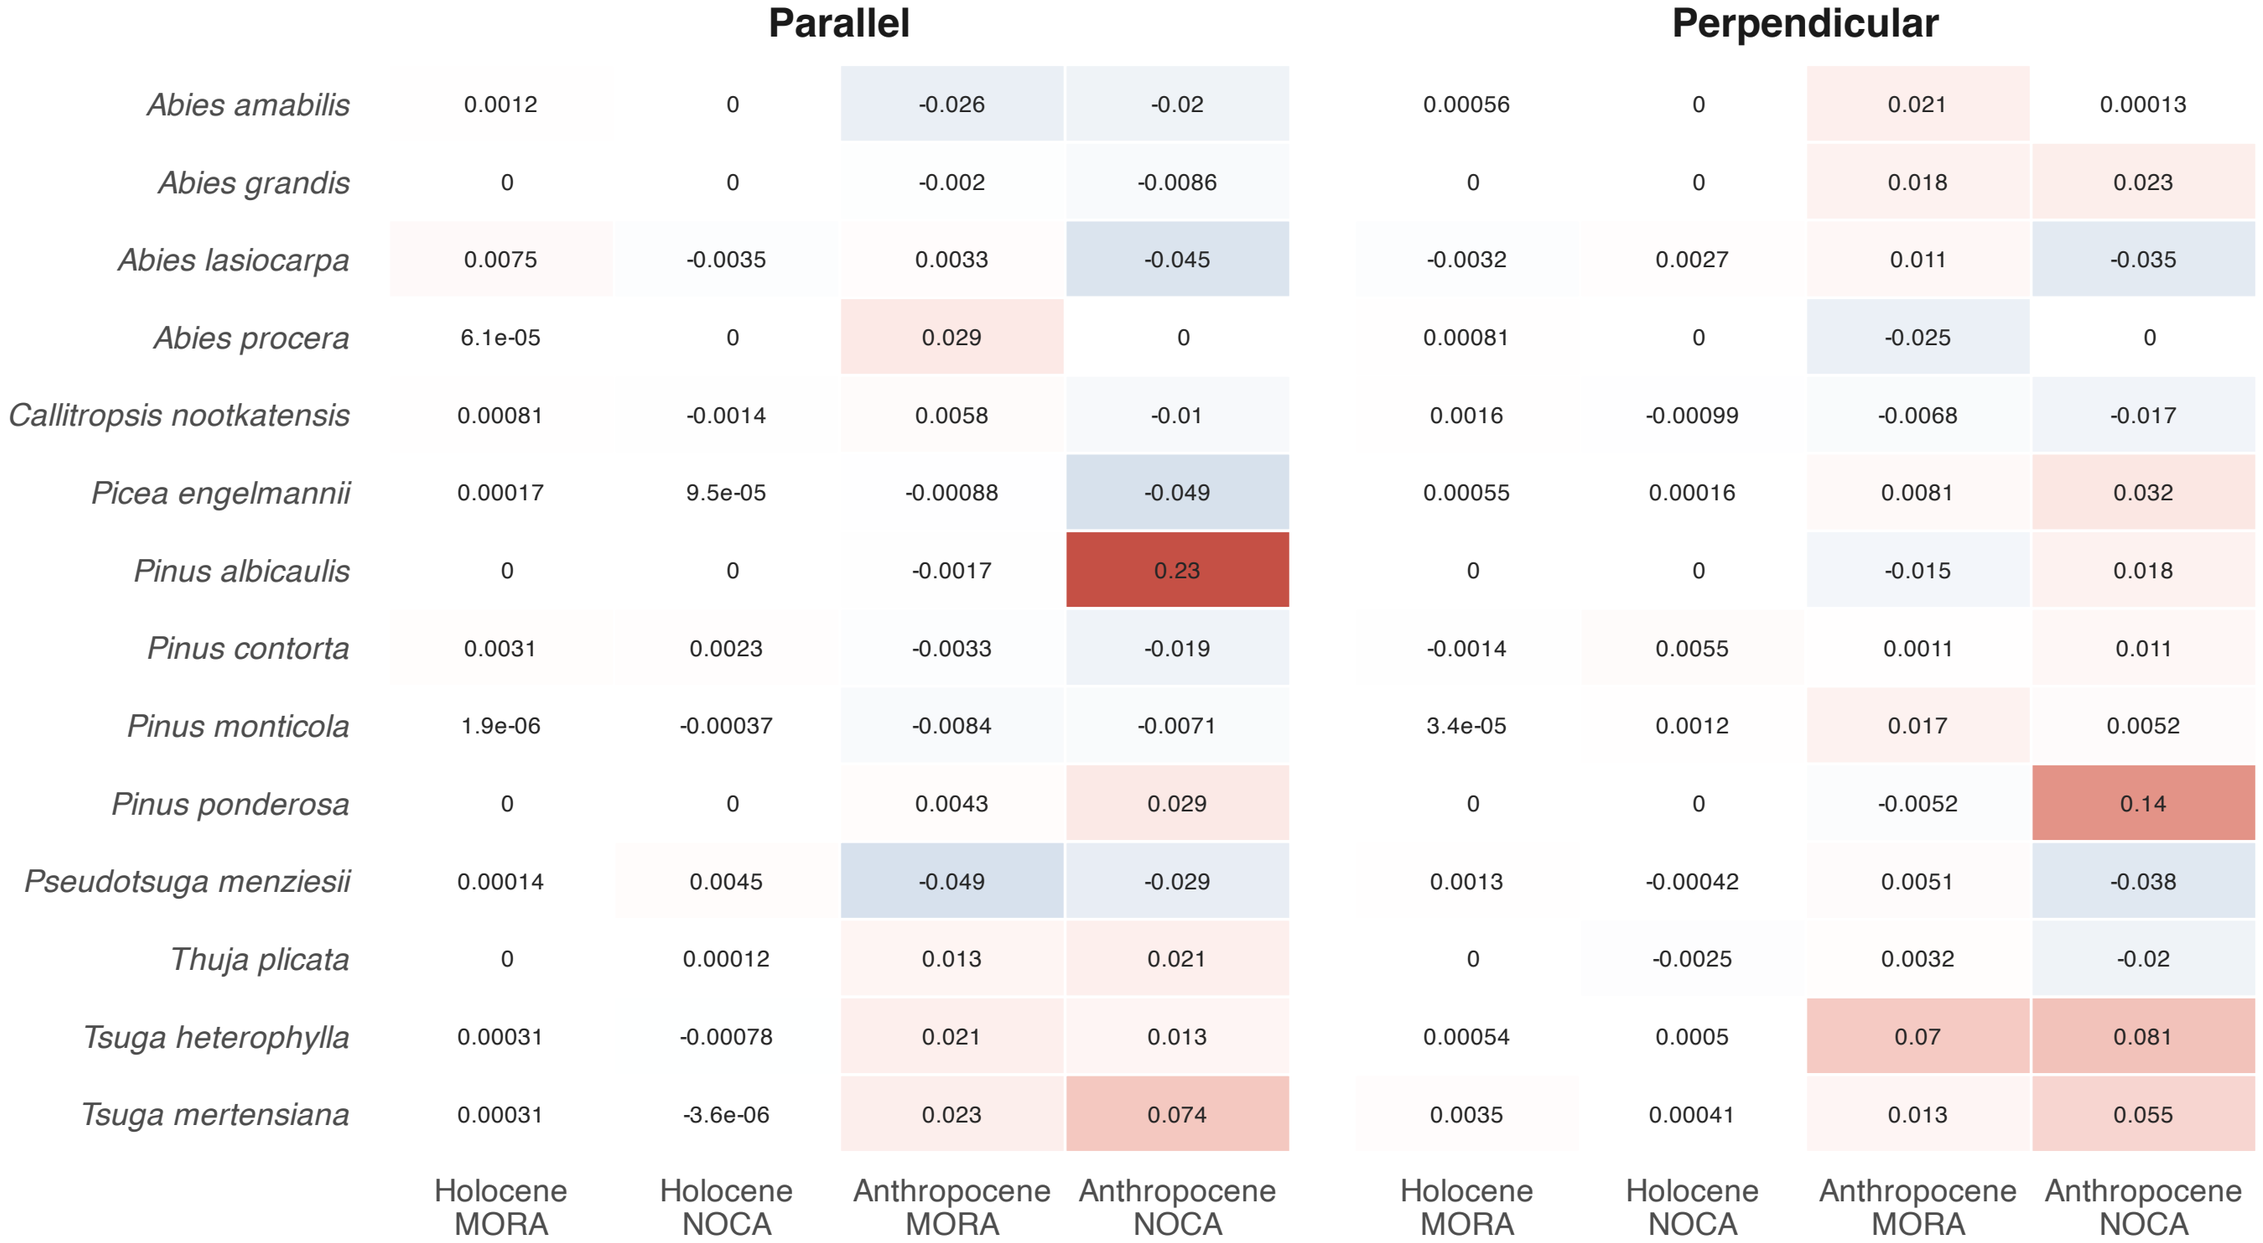

Holocene: offset 200 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.

Species movement relative to climate-predicted movement

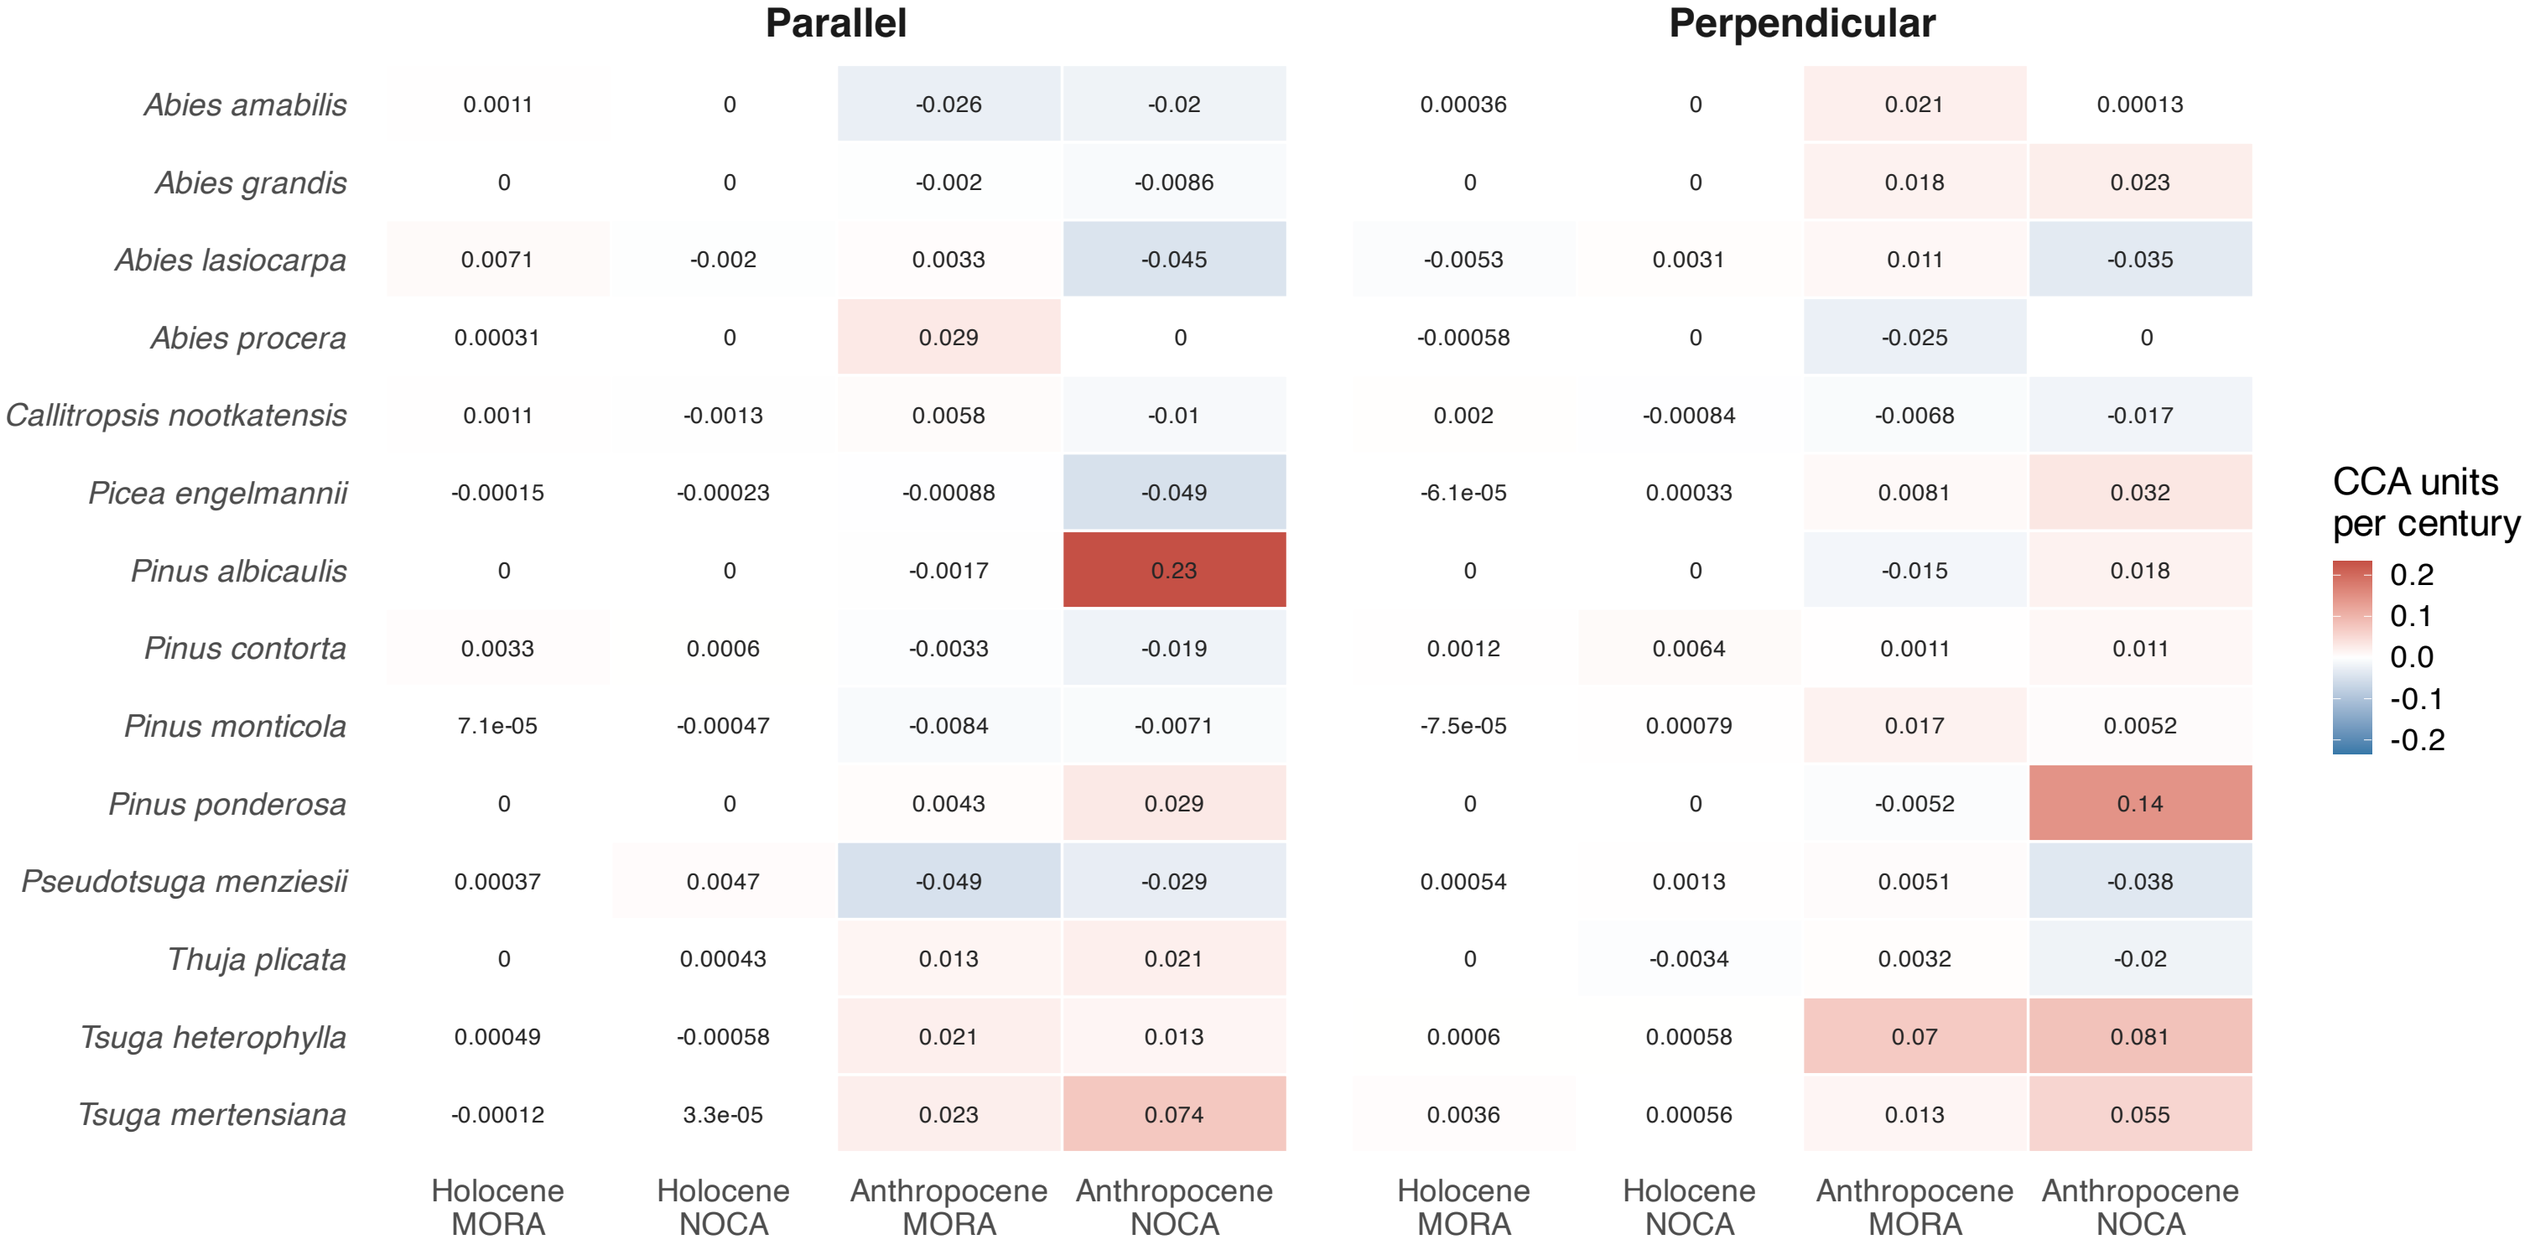

Holocene: offset 300 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.

Species movement relative to climate-predicted movement

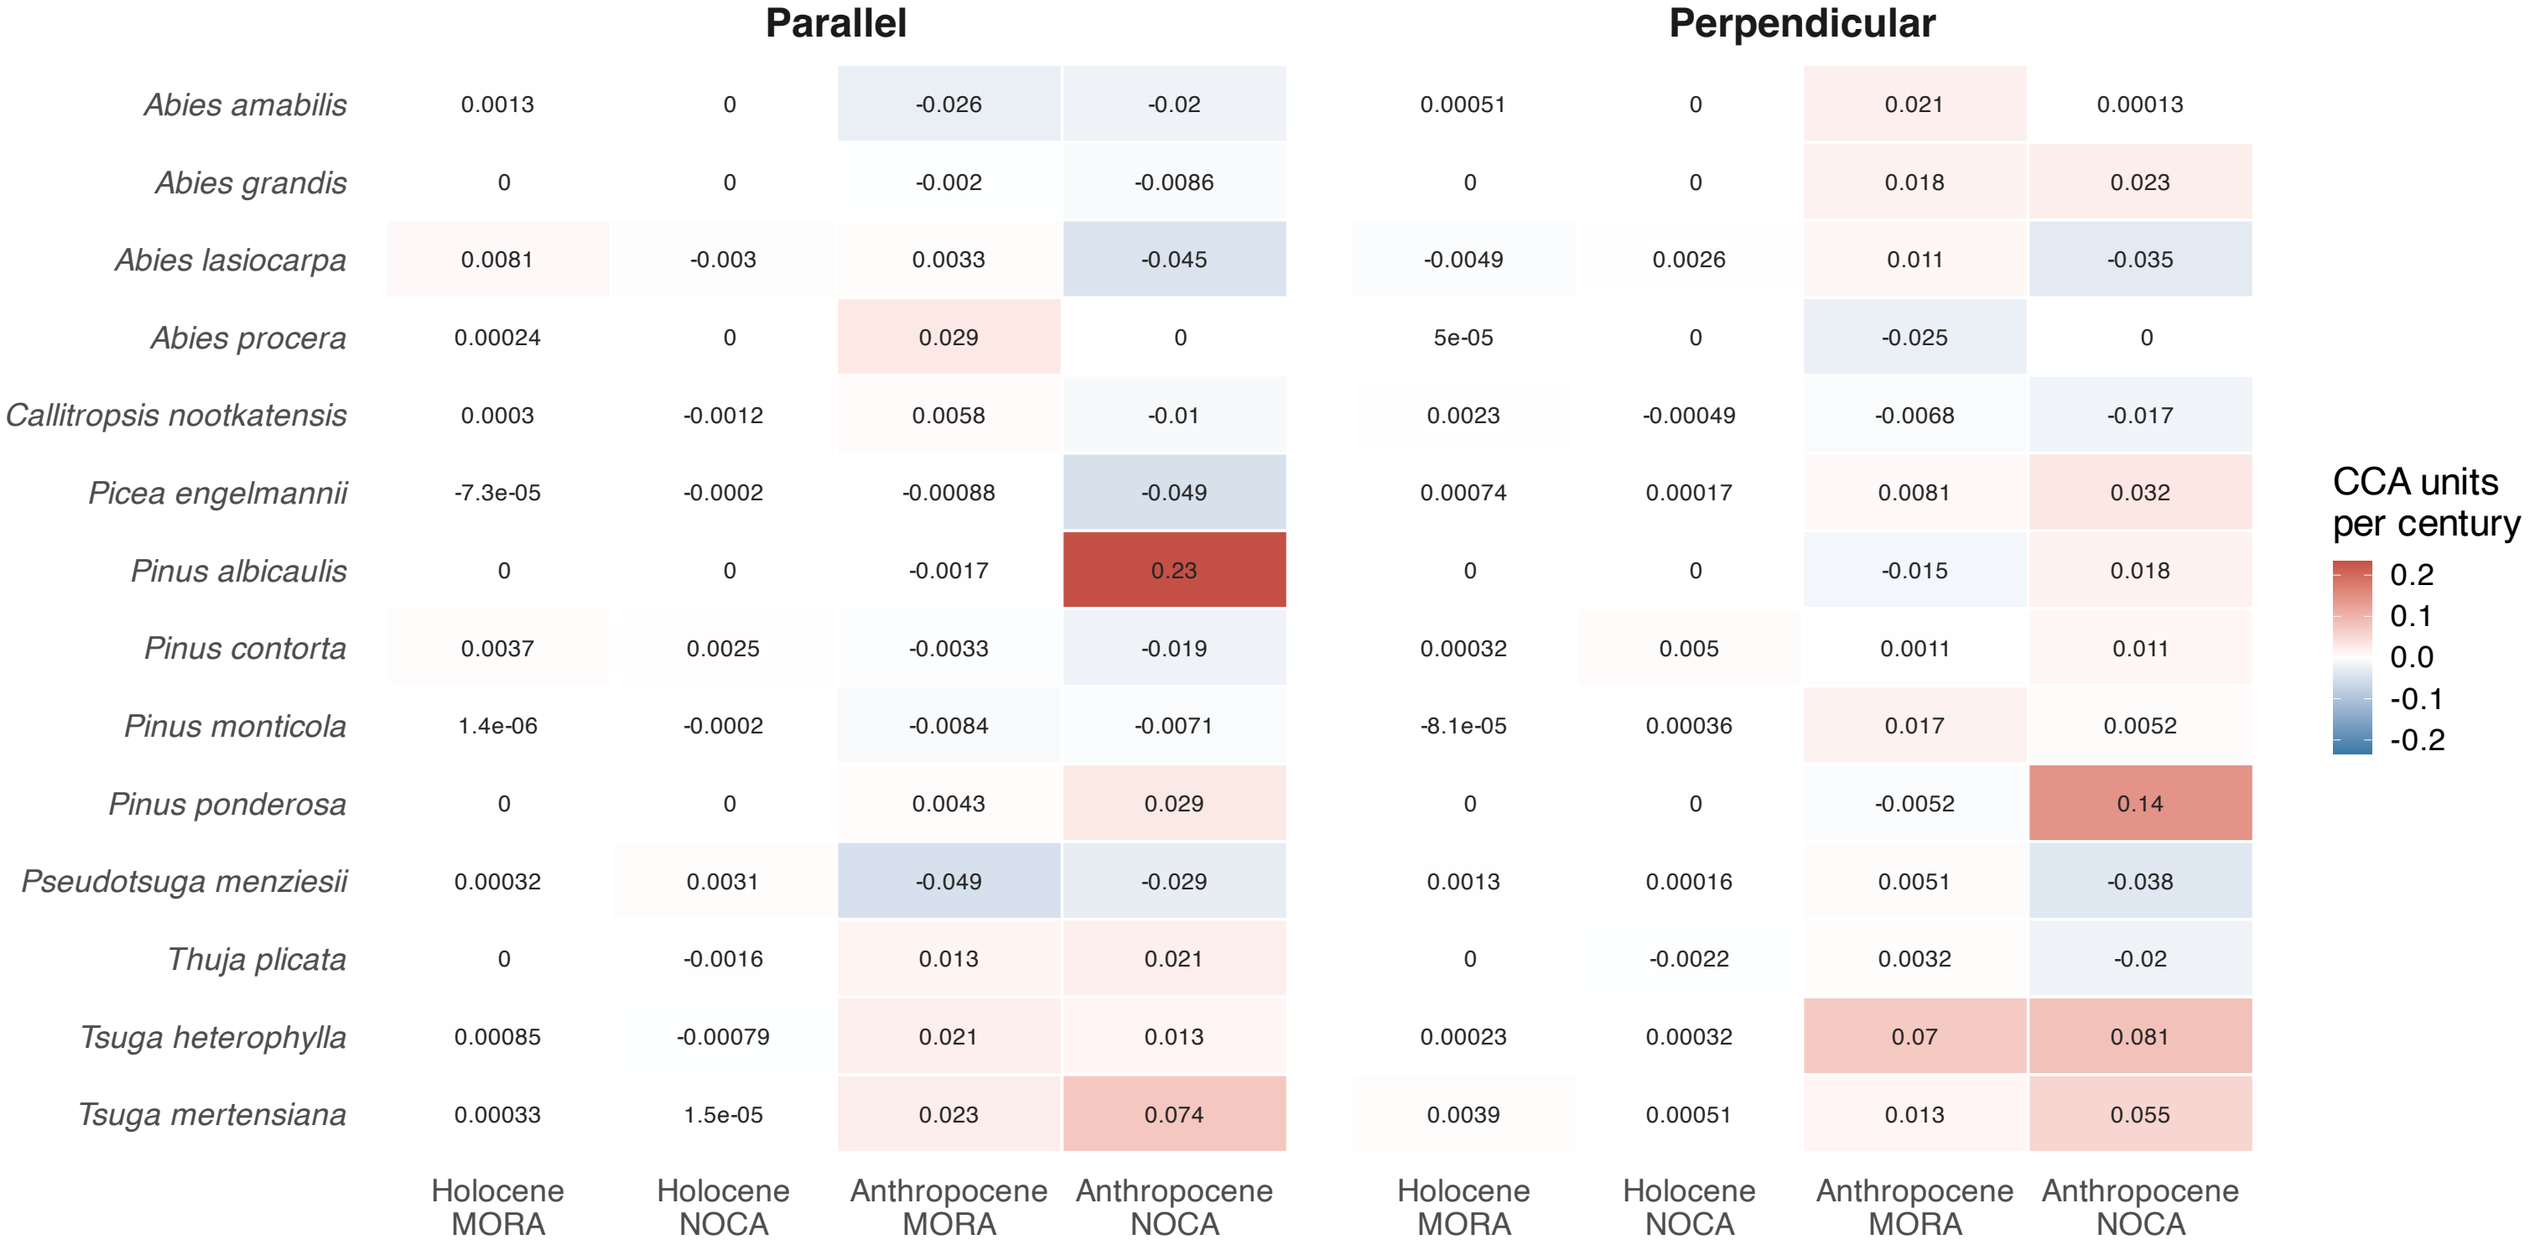

Holocene: offset 400 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.

Species movement relative to climate-predicted movement

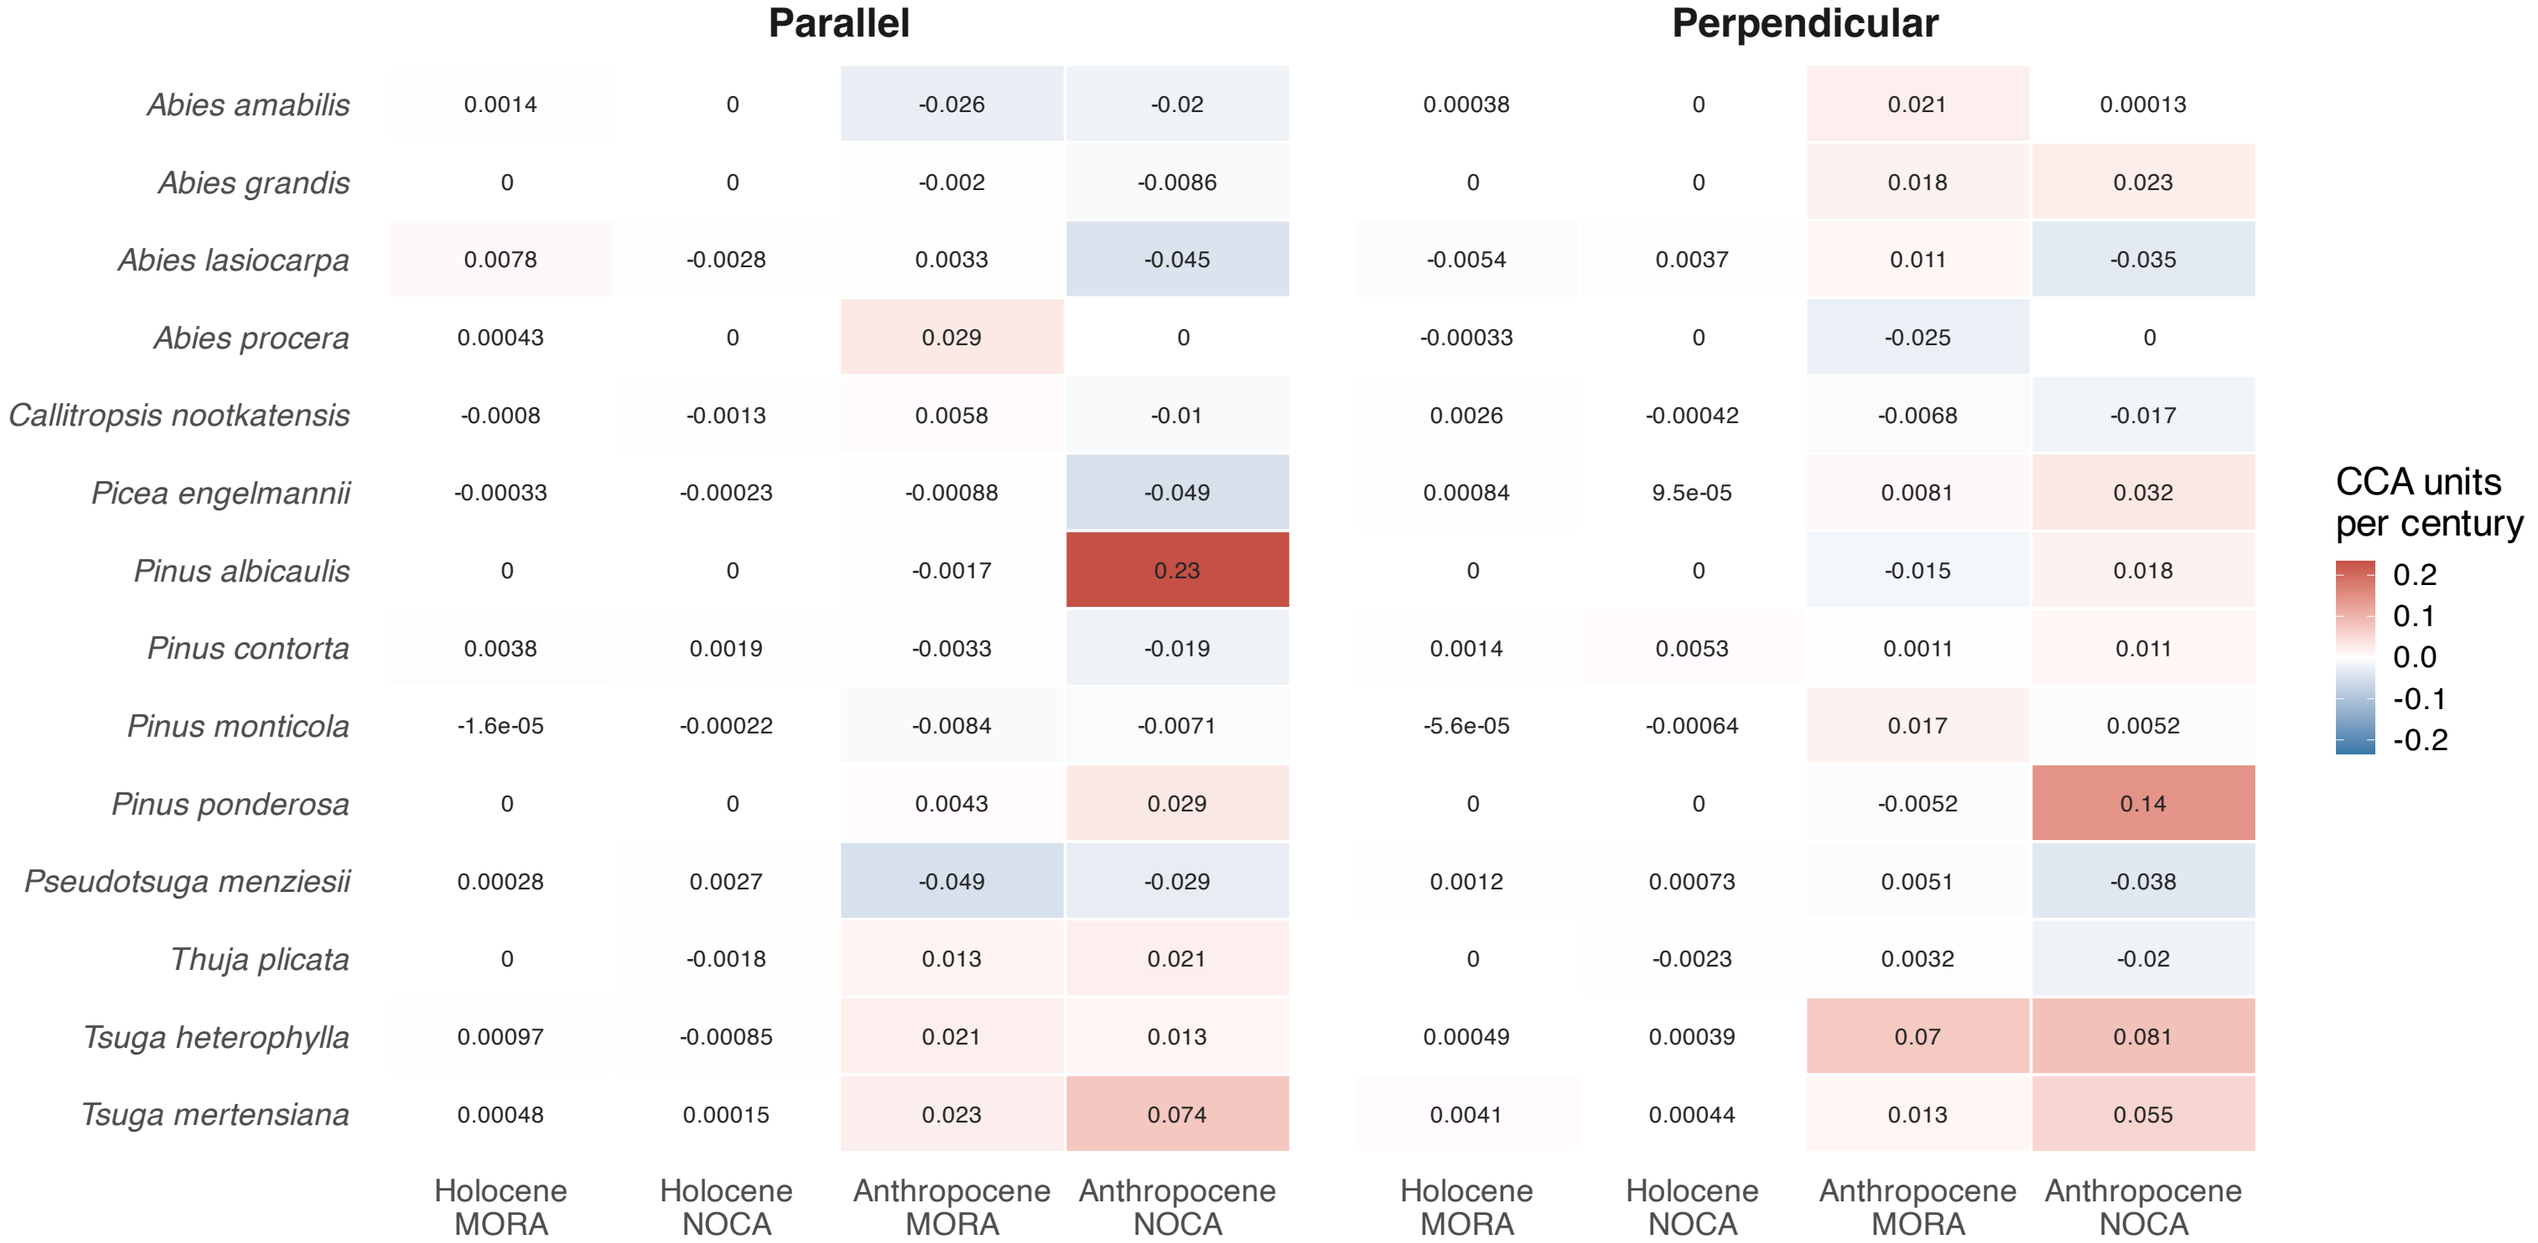

Holocene: offset 500 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.

Species movement relative to climate-predicted movement

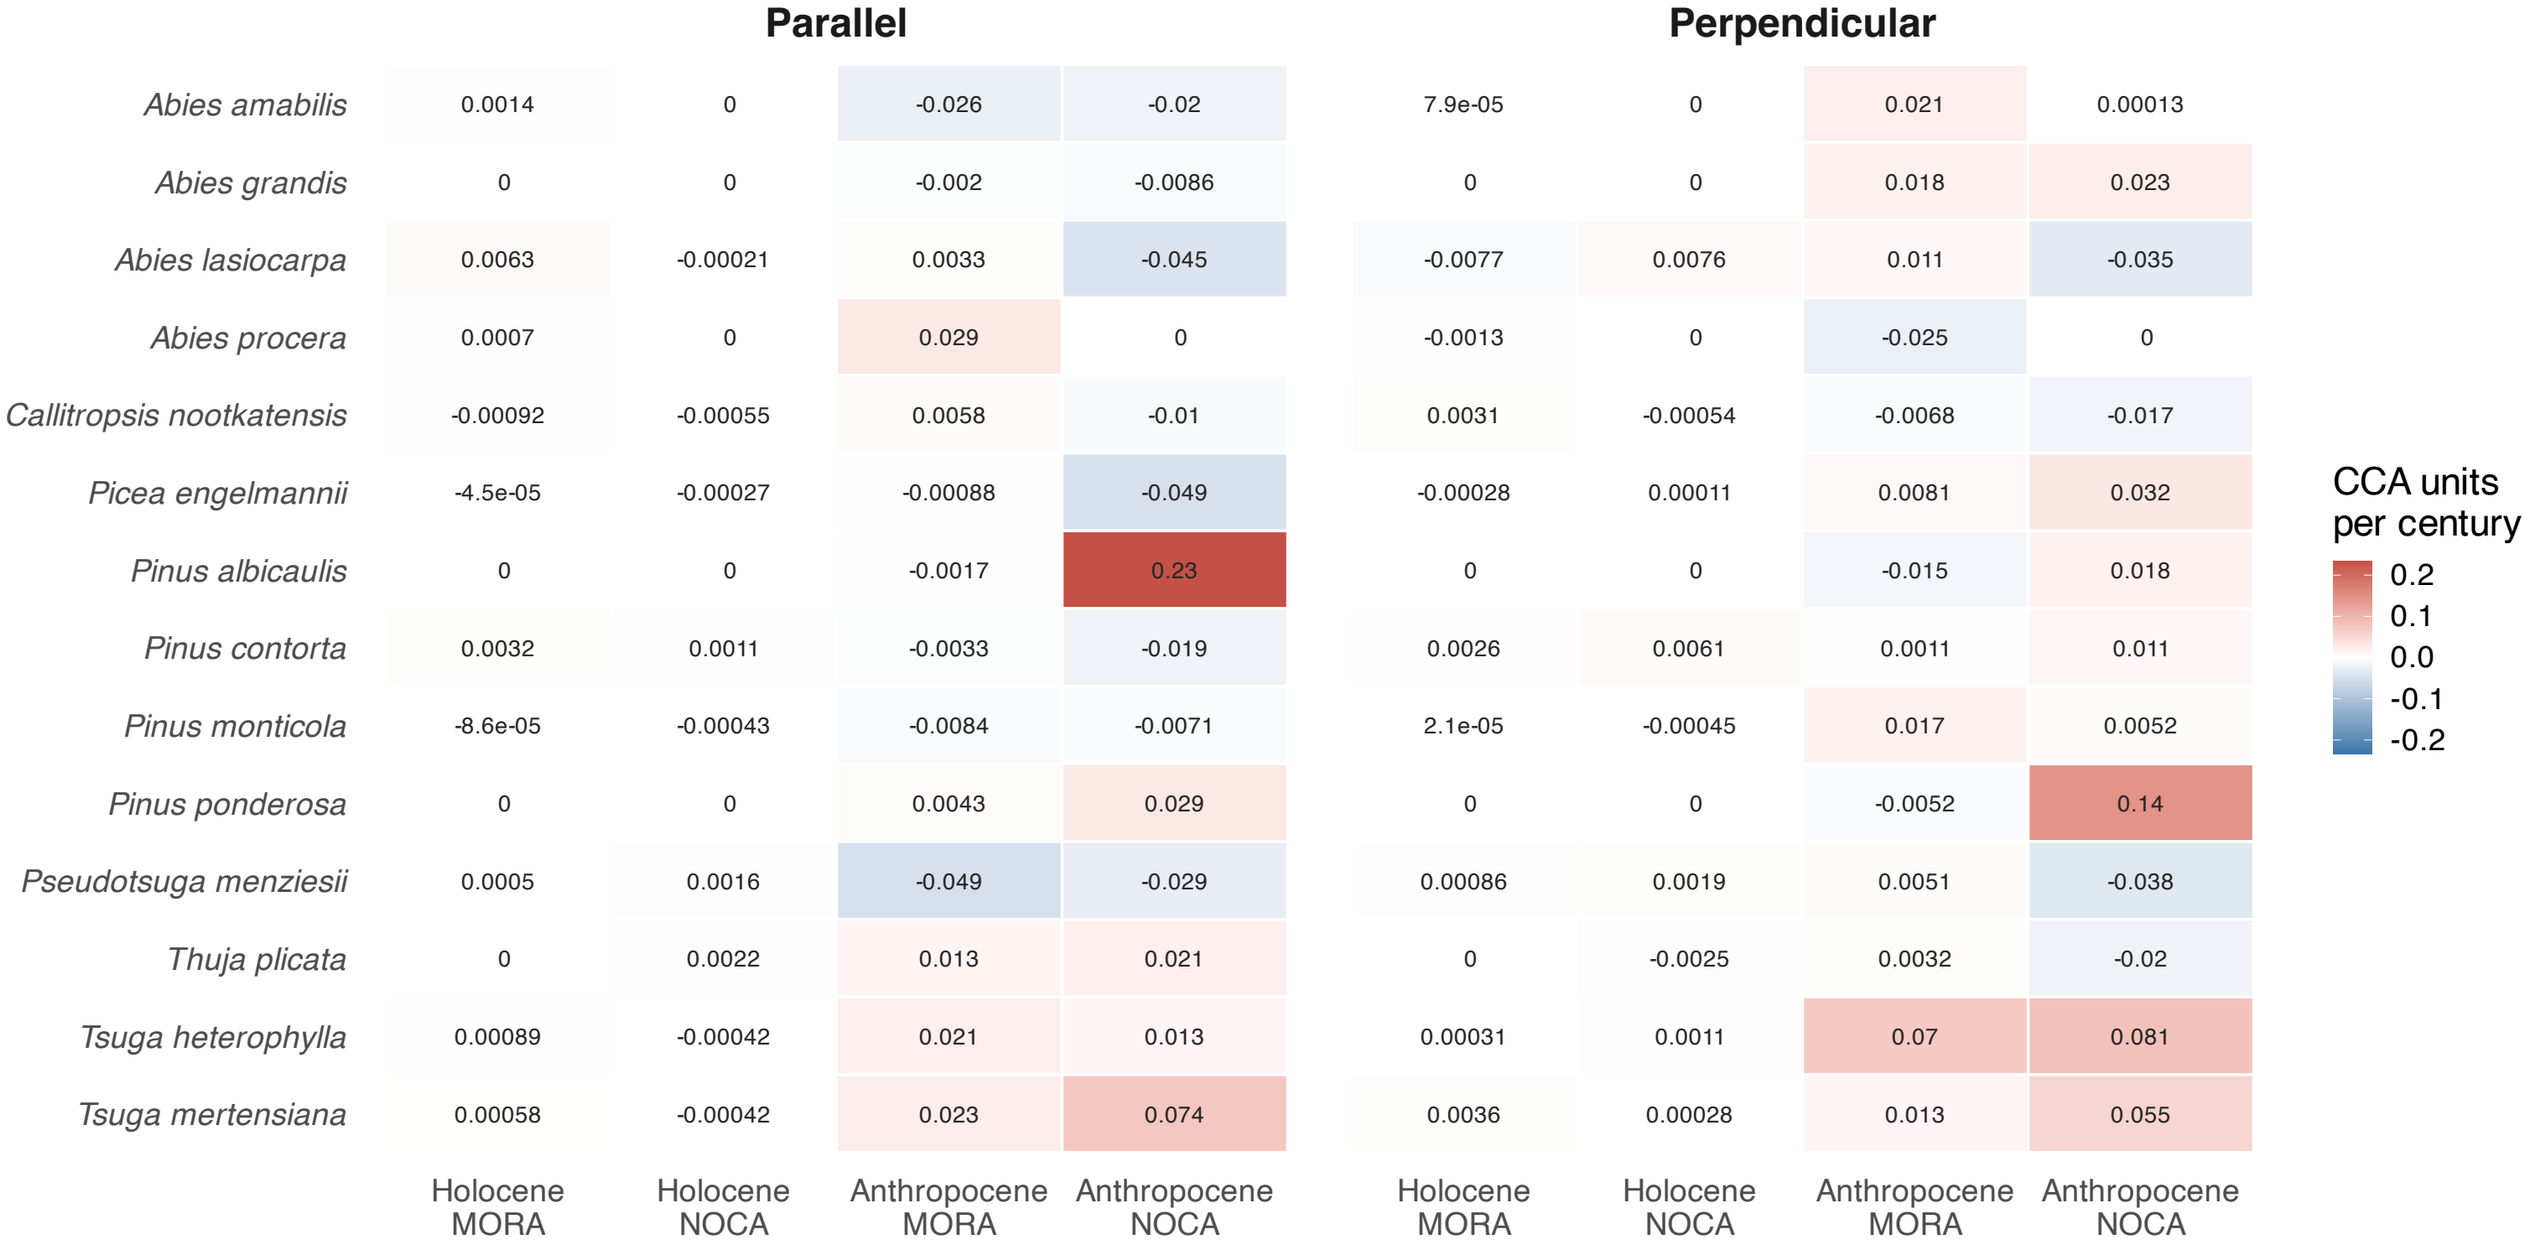

Holocene: offset 600 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.

Species movement relative to climate-predicted movement

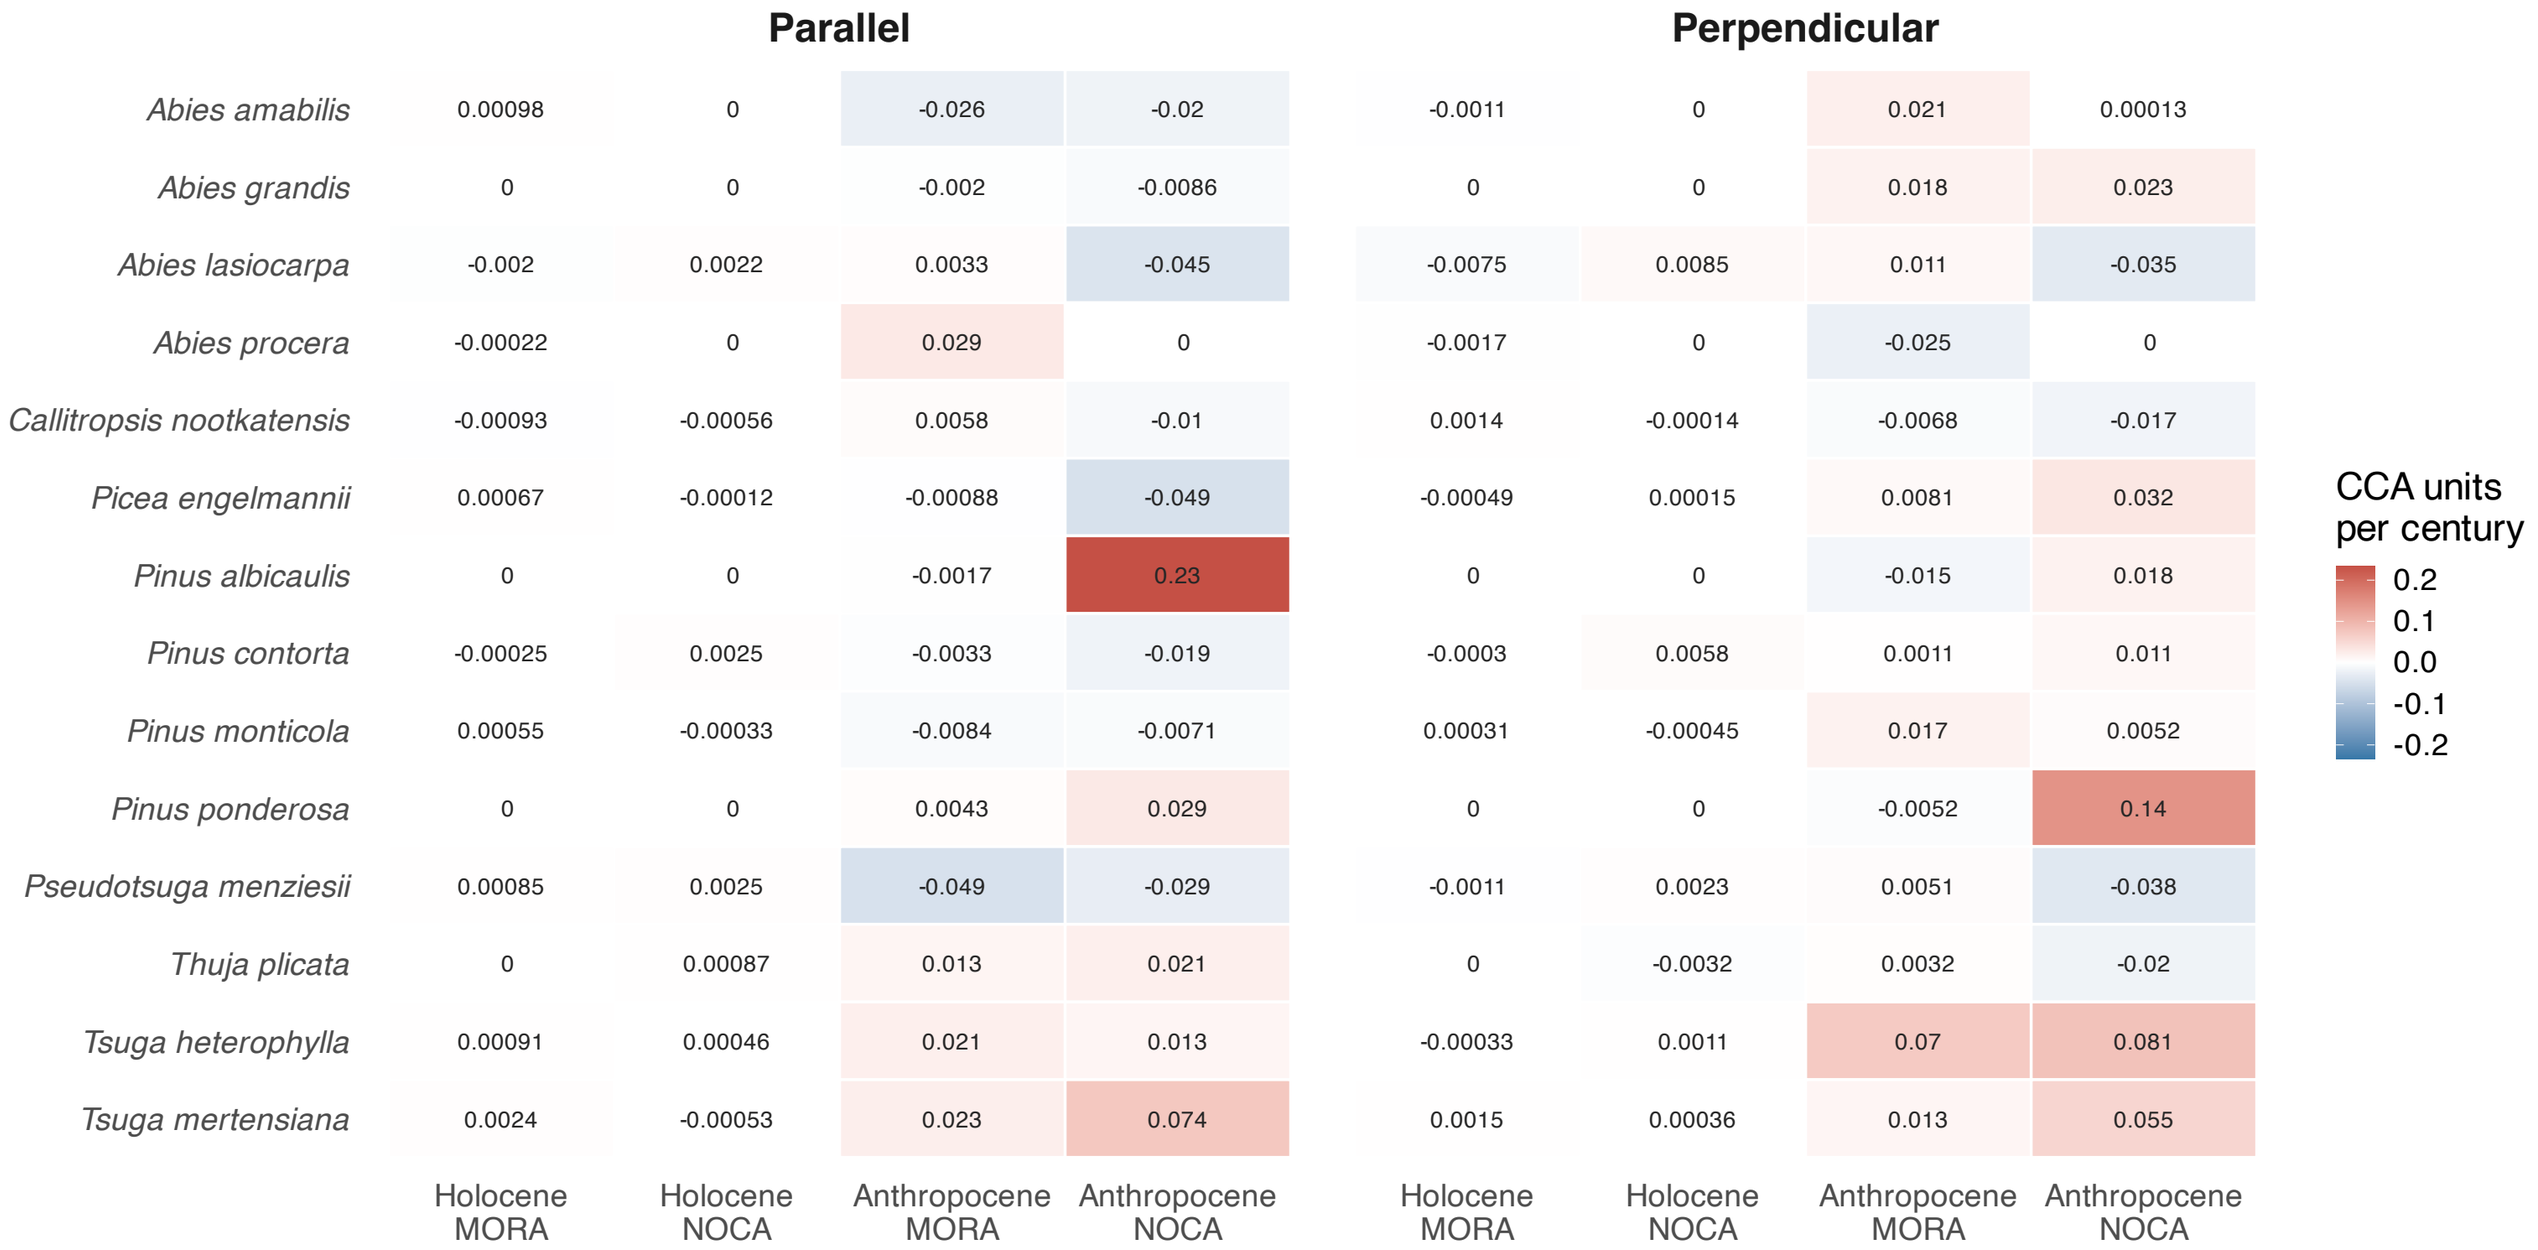

Holocene: offset 700 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.

Species movement relative to climate-predicted movement

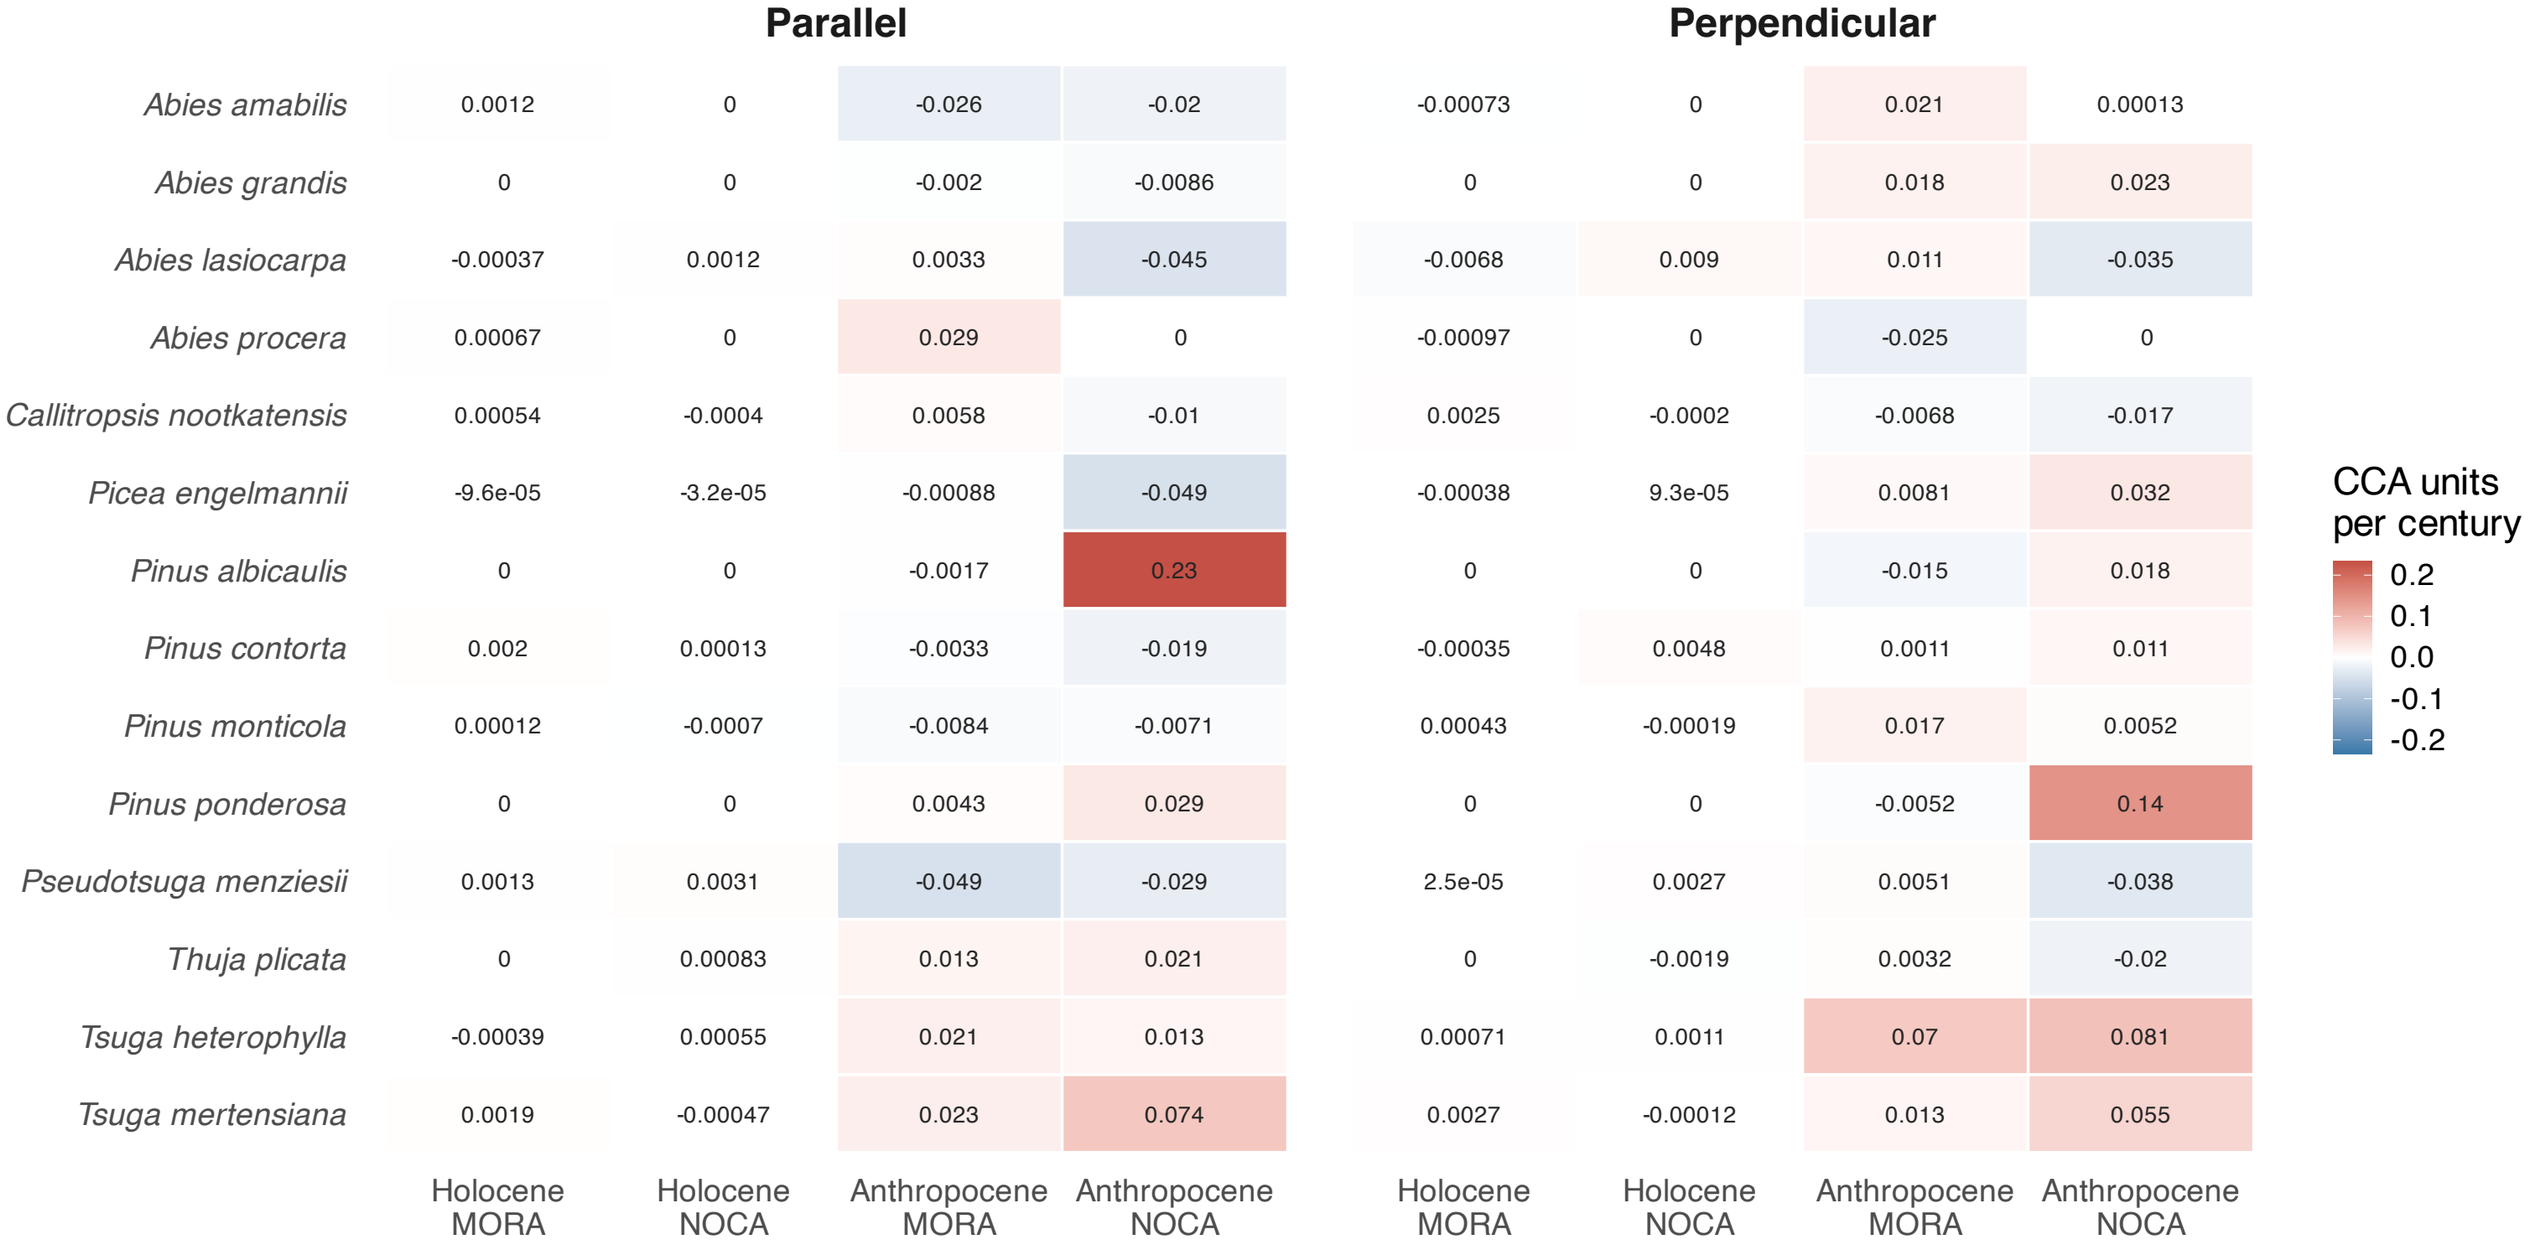

Holocene: offset 800 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.

Species movement relative to climate-predicted movement

Holocene: offset 900 • median across whole draws of equal-lake trajectory means; Anthropocene: plot means

Positive parallel: same direction. Positive perpendicular: counterclockwise. Grey: undefined. No fitted statistical models.
