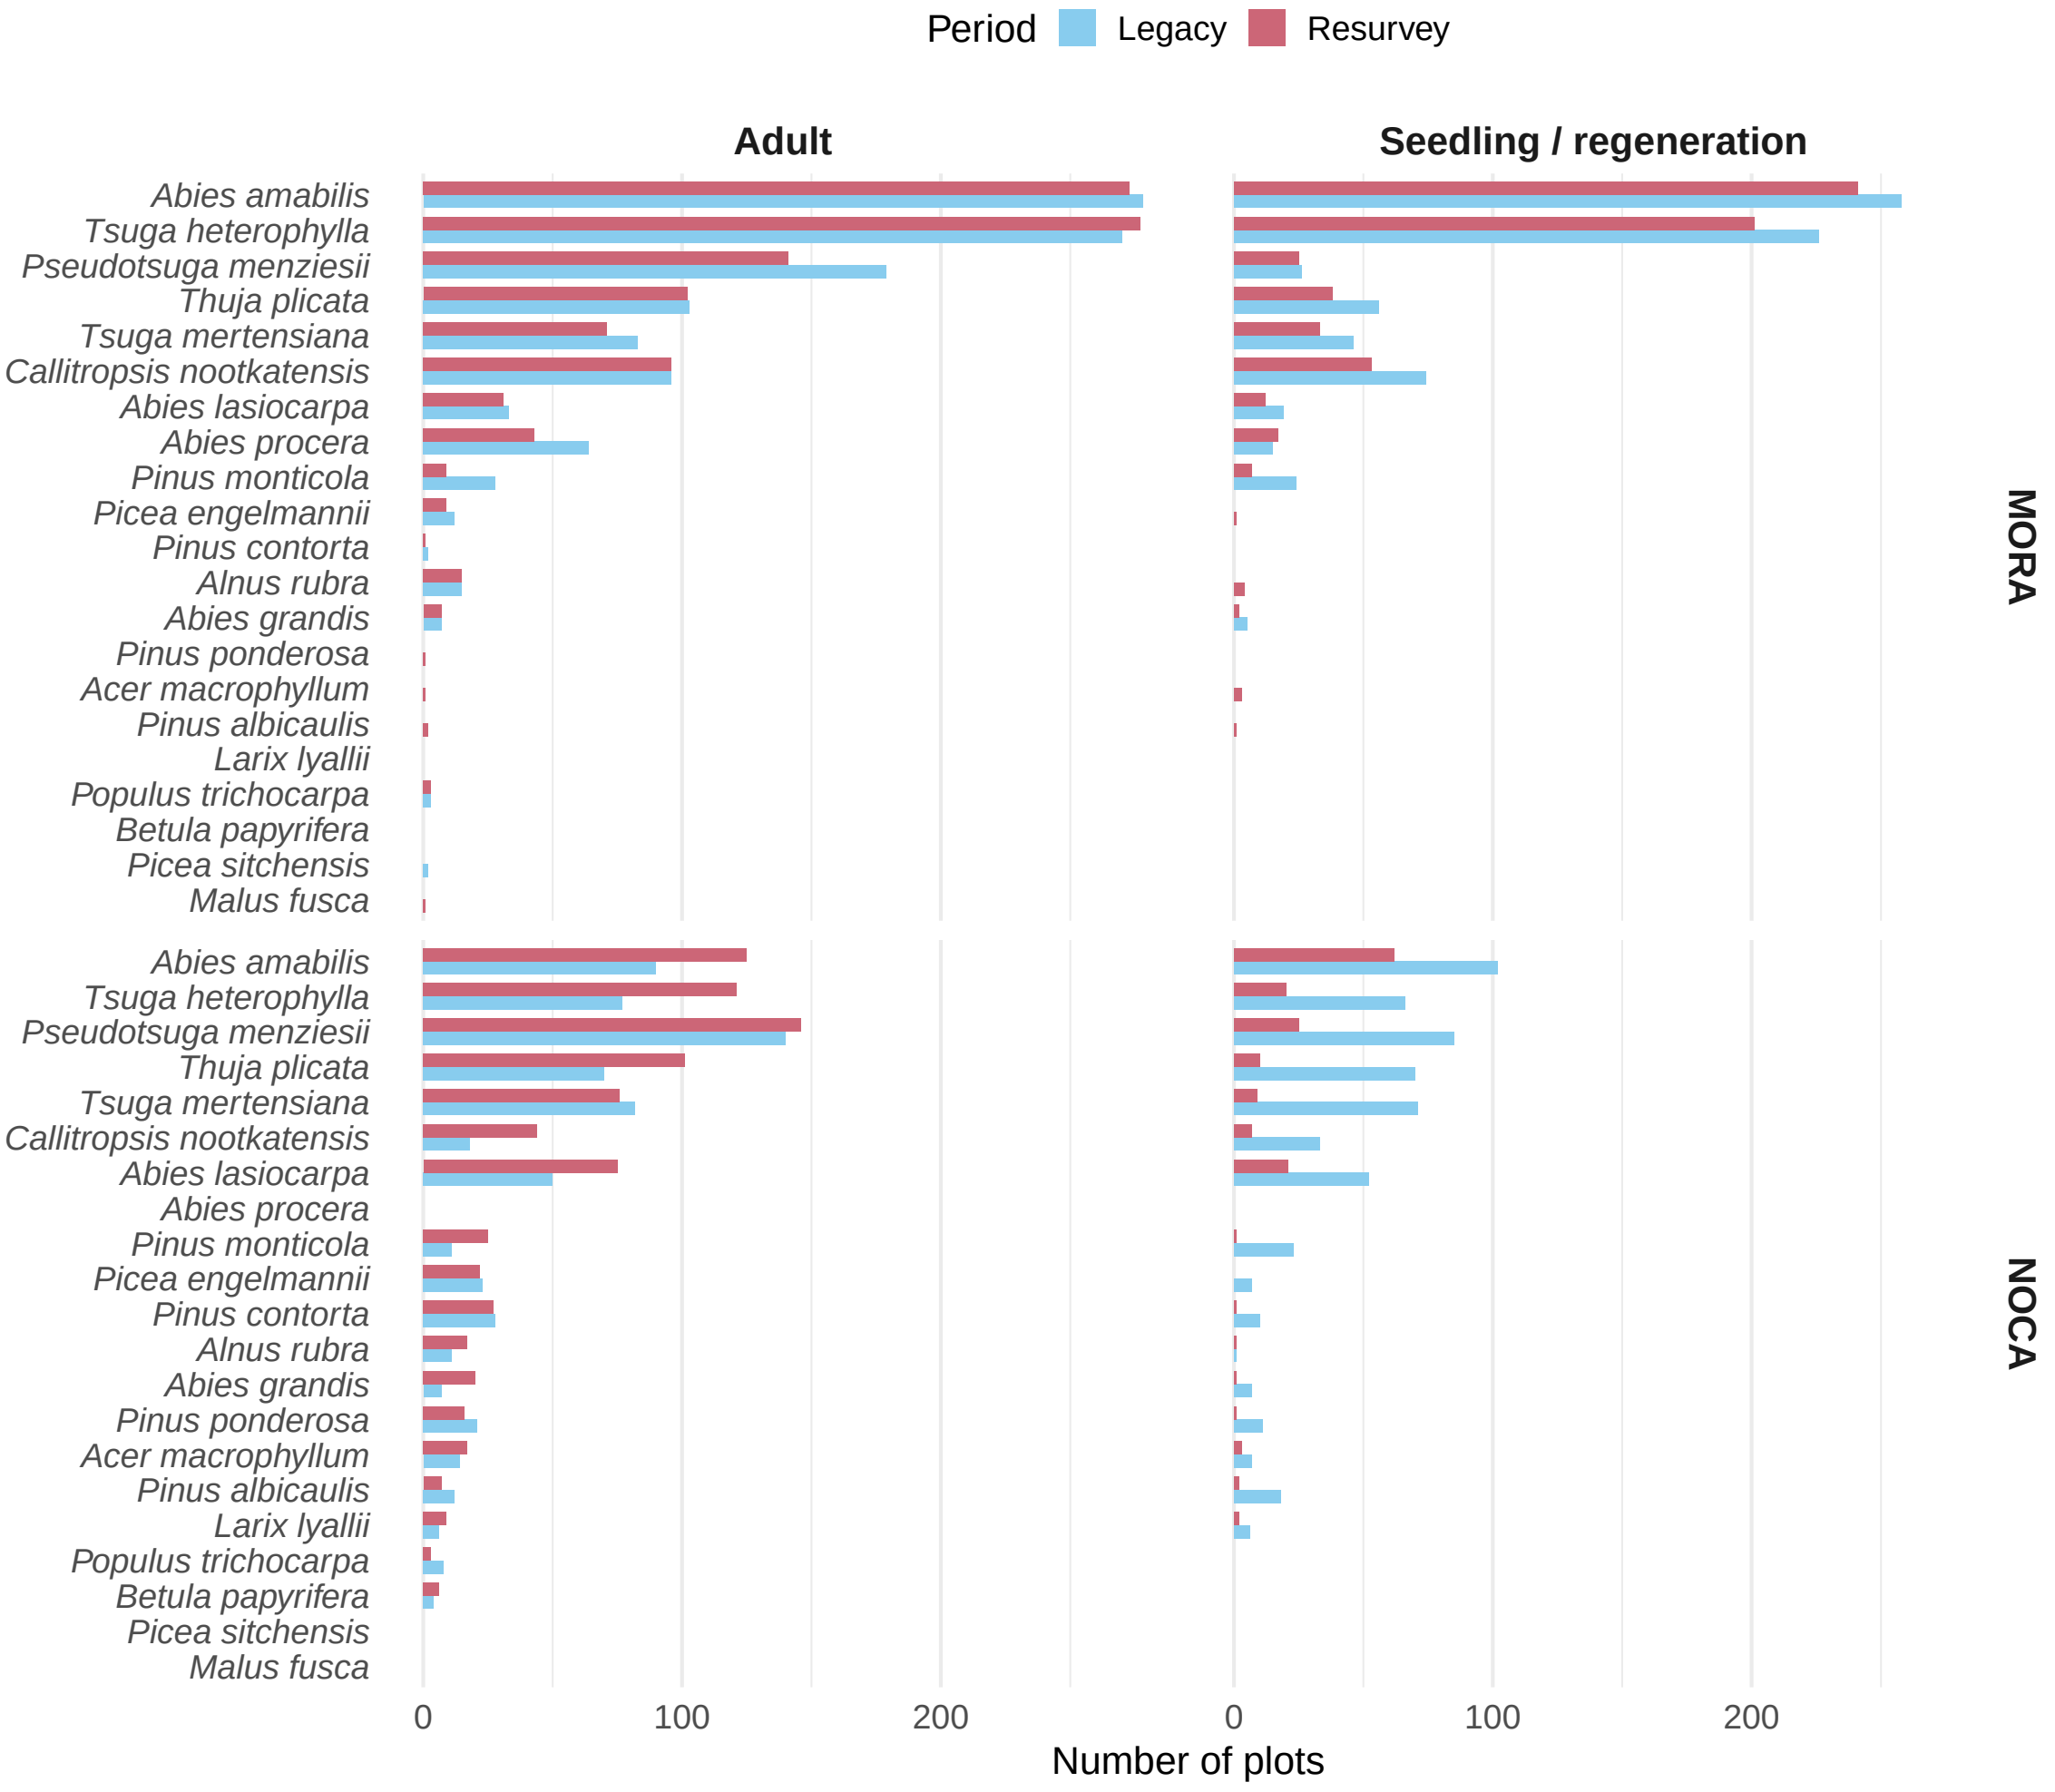
Adults and regeneration: legacy versus resurvey

Plots per species at each vegetation stage.
Consolidated tree taxa; understory taxa excluded.



NOCA adults: >3 m in legacy surveys; >1.4 m in resurveys.
NOCA regeneration: 0−3 m in legacy surveys; 10−140 cm in resurveys. MORA: 10−140 cm at both dates.
The NOCA legacy versus resurvey regeneration comparison therefore uses different height bands.
