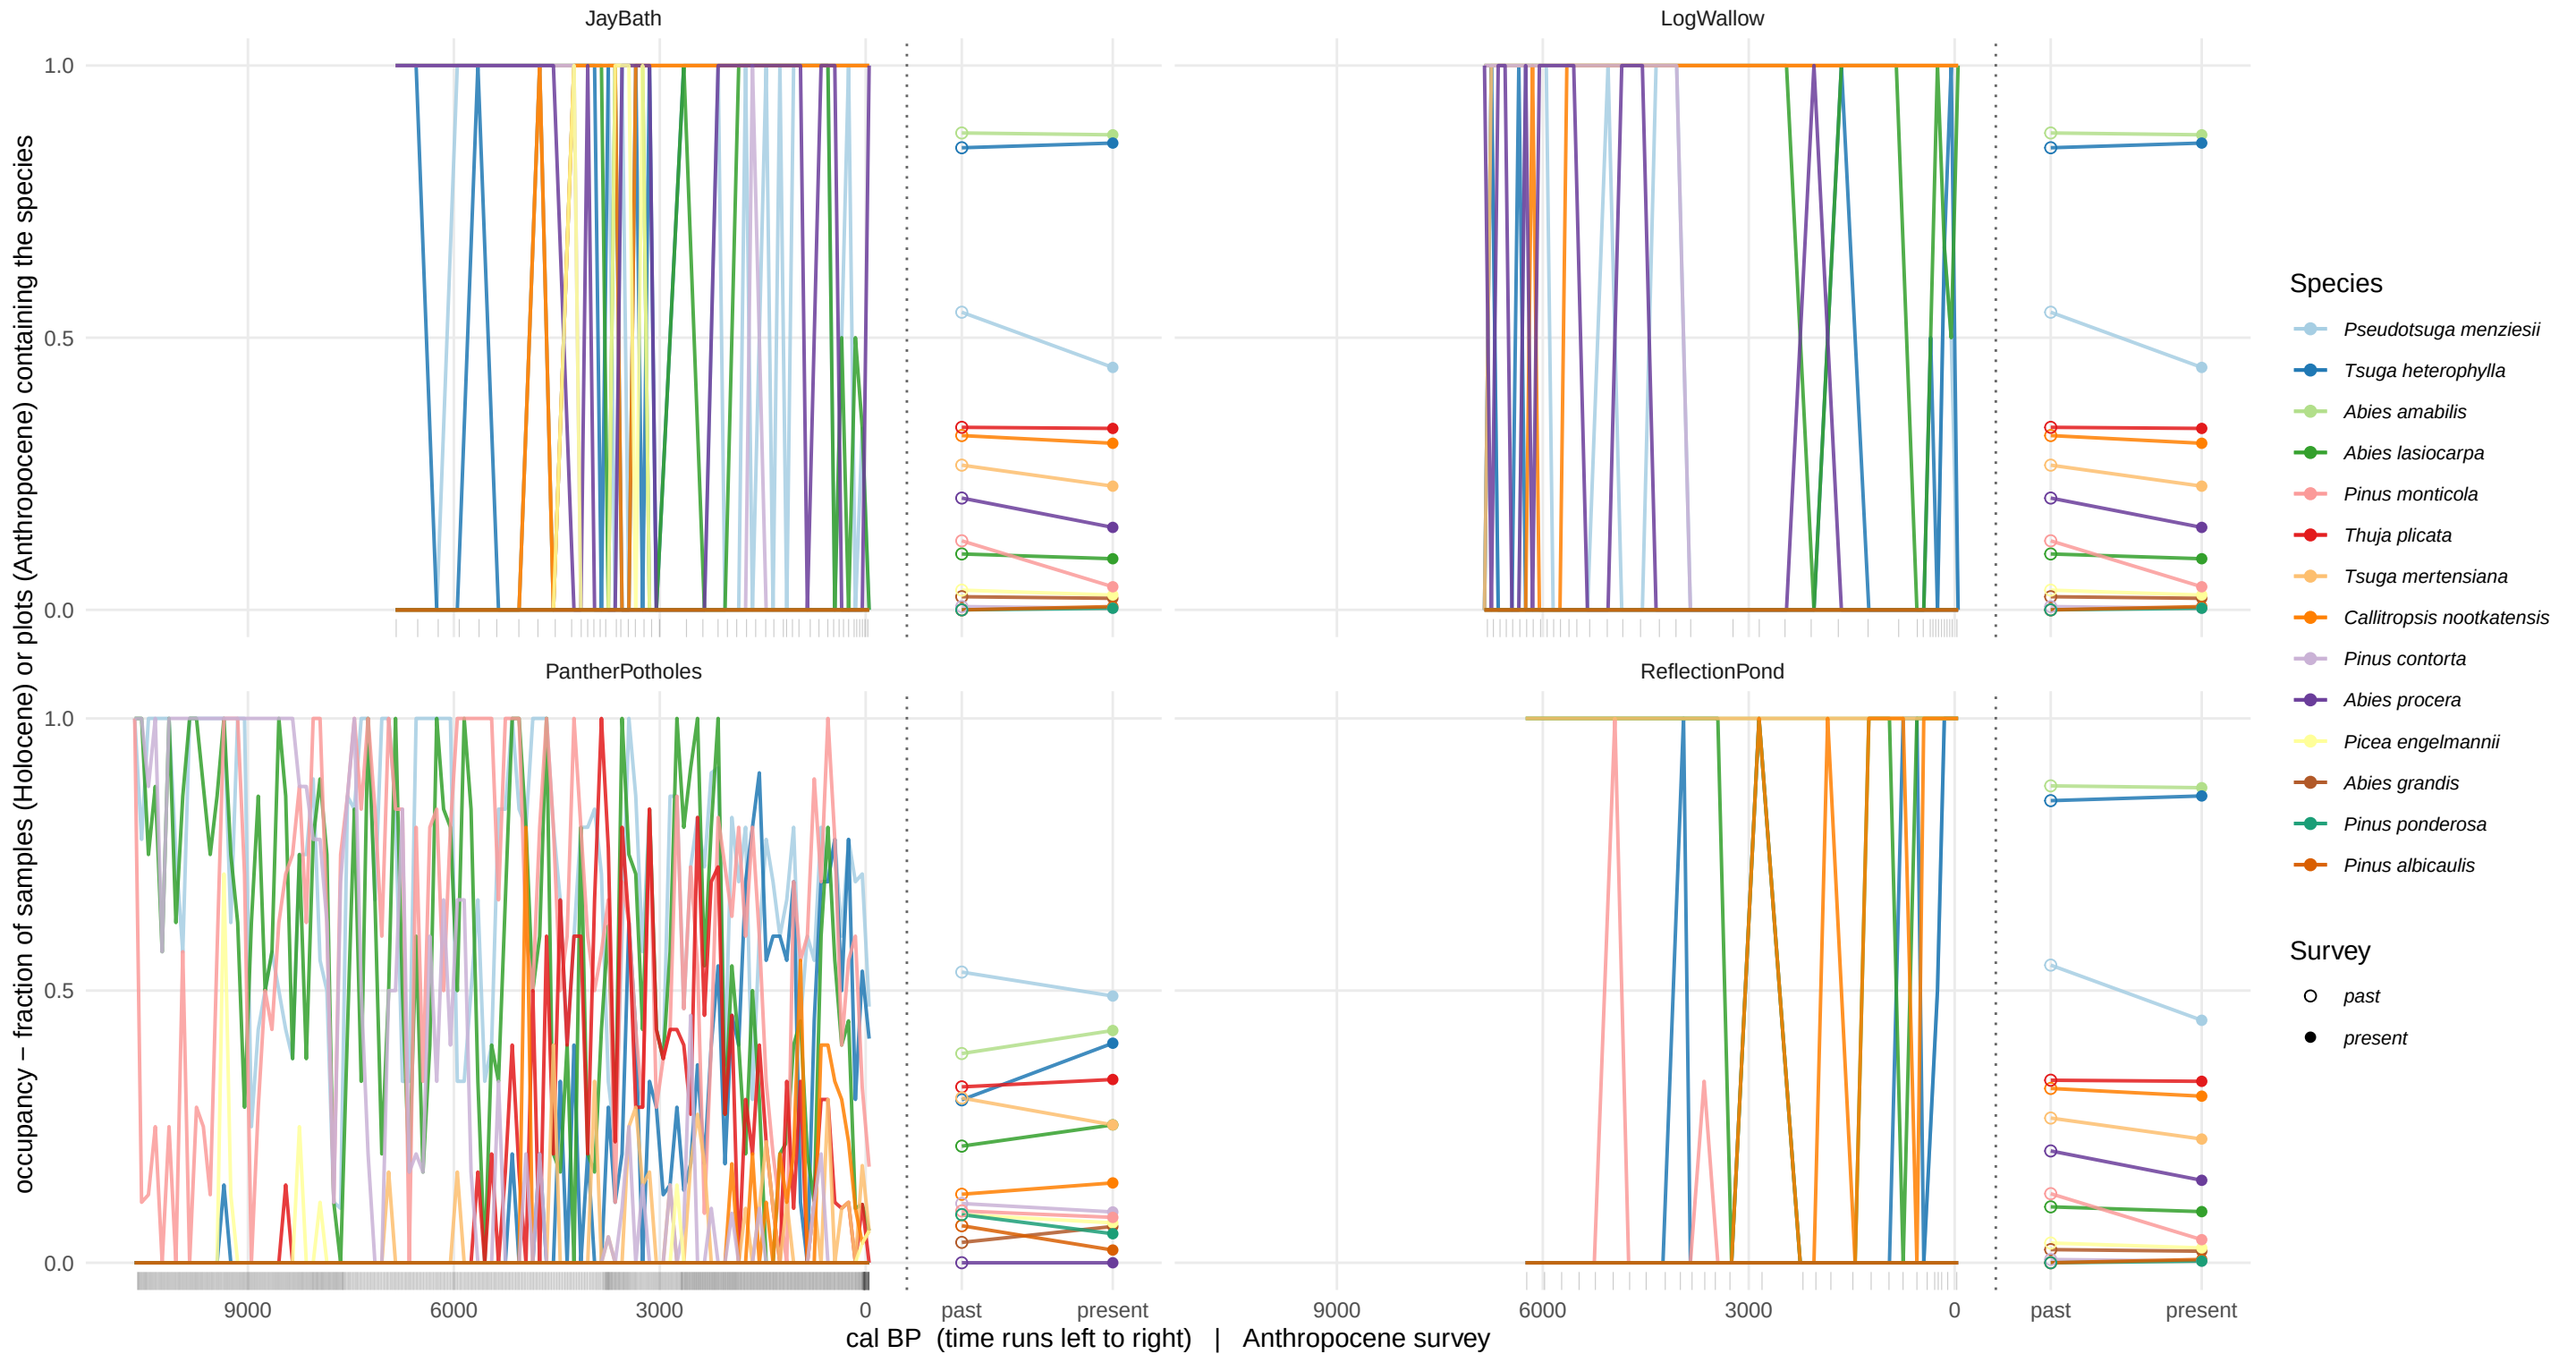
Species occupancy through time, by pond − the 14 species the CCA uses (count.thr = 20)

One line per species. Holocene = 100−yr moving window at 100−yr steps. Right of the dotted line: the survey change for the SITE this pond belongs to (the three MORA ponds share MORA's; PantherPotholes carries NOCA's), past and present joined so the segment's slope is the change.



Presence/absence throughout. Ticks mark actual macrofossil samples − where sparse, the Holocene line is thin evidence.
Dropped below count.thr = 20: Acer macrophyllum, Alnus rubra, Betula papyrifera, Juniperus communis, Larix lyallii, Malus fusca, Picea sitchensis, Populus trichocarpa.
